

=====

SENTINELSHIELD: SECURITY AUDIT & VERIFICATION REPORT

=====

Date: September 4, 2026

Target System: Linux / Debian Host (Auth Logs Monitored)

Evaluated Vectors: MITRE ATT&CK T1110 (Brute Force)

1. OBJECTIVE

Verify that SentinelShield detects automated credential-stuffing against SSH endpoints and executes automated firewall containment.

2. TEST METHODOLOGY

- Tool Used: Hydra v9.x
- Command Executed:
hydra -l testuser -P wordlist.txt ssh://192.168.1.50 -t 4
- Baseline: Target accepts connections on Port 22.

3. OBSERVATIONS & LOG TRACES

- Telemetry Ingestion:
Endpoint recorded sequential "Failed password for invalid user" in /var/log/auth.log.
- SIEM Correlation:
Wazuh triggered Rule 100201 (Severity Level 10) upon registering 5 failed attempts within 60 seconds.

4. AUTOMATED CONTAINMENT RESULTS

- Script Trigger: sentinel_block.py executed automatically.
- Firewall State:
iptables -I INPUT 1 -s <ATTACKER_IP> -j DROP
- Outcome: Connection reset by peer. Subsequent attack traffic dropped at kernel boundary with 0 manual intervention required.
- Response Latency: 1.2 seconds from threshold breach.

Status: PASSED / VERIFIED
